PATENT  
Filed: April 21, 2001CASE NO.: 50P4426  
Serial No.: 09/839,000  
March 24, 2008  
Page 6**Remarks**

Reconsideration of the application is requested.

**Amended Independent Claim 1**

Claim 1 has been amended to recite that the ITV receives content of the virtual channels in the vertical blanking interval of a television signal as taught in the present specification on page 5, last sentence. Of the applied references, it appears that Blackketter et al. is the most germane to this limitation, but Blackketter et al. at most appears to embed only "triggers" in the VBI that are used by the device to look up URLs, see paragraphs 60-64; Blackketter et al. does not appear to suggest downloading the content of the virtual channels in the VBI. Claims 1 and 3-6 are patentable.

**New Claim 23**

New Claim 23 recites an ITV in which the microprocessor displays an electronic channel guide, with the virtual channels being listed at the end of the guide after TV channels as taught in the present specification on page 8, lines 9-11. The relied-upon references do not appear to teach or suggest such an EPG.

**New Claim 26**

New Claim 26, as taught on the last three lines of page 8 continuing to page 9, recites that the mixer mixes a Web-based signal from the modem with related signals from the tuner such that Web-based content of a virtual channel is combined with an actual broadcast newscast from a TV station associated with the Web-

based content for simultaneous display of thereof. Such mixing does not appear to be contemplated by the relied-upon references.

The examiner is cordially invited to telephone the undersigned for any reason that would advance this application to allowance.

Respectfully submitted,

---
